How to protect your company against online and offline security threats.

Date: Booking required. | Location: In company | Days: ½

Businesses are constantly, often without their knowledge, being targeted by cyber-attacks which can compromise security and put sensitive data at risk. Threats, from both online and offline sources, will impact on business resilience, affect compliance, brand, reputation and profit. Although company employees are expected to understand programme suites such as Microsoft Office, they may not be aware that they are innocently exposing the company to risk just by normal use of the internet or email. Examples include bad password management, opening fake emails with malicious attachments masquerading as invoices, documents, pdfs and graphic files or attaching potentially contaminated USB flash drives or their personal devices to the company network. This is why security training is essential to reduce such risks. Our workshop is ideally suited to existing employees or new ones on induction training. It can be presented on a one-to-one basis or to a small group.

This workshop includes;

- Explaining what online and offline security threats are and how to take steps to minimise your exposure to them,
- How to develop good computer housekeeping including, how to correctly set up and safeguard passwords,
- How to successfully use antivirus and antimalware utilities,
- The misuse of attached devices such as USB flash drives,
- Failures in the provision of adequate back-up policies,
- The use of out dated operating systems and software,
- The use of social networking and the inadvertent placing of sensitive information online,
- The discussion of malicious email attachments and links,
- Offering suggestions on preventative measures to avoid being easily targeted.

At the end of this course delegates will have a practical understanding of how to protect themselves and their business against cyber and other computer related threats, and how to adopt good housekeeping techniques to minimise any threats that may occur in the future. There will be a Q & A session at the end and case studies can be discussed.

Camtek CSI
computer security & forensics

- Attending this workshop gives a current under-standing of the cyber and other security threats (on and offline) that can affect you and your business.

- £325 +VAT workshop materials included.

- Contact us early to reserve your companies slot.

- CPD attendance certificate.

"Camtek CSI has worked closely with our company on a number of IT and compliance issues. Throughout various projects I have found them to be conscientious, hardworking and possessing skill levels of the highest quality."

Peter Muller, Managing Director, Curzon Communications, London, UK.
